MUSEUM FIELDWORK
CHESHMEH ALI
ARCH 425: Praxis III Independent Study

Cheshmeh Ali:
the site and material
- Dates to the Transitional Chalcolithic Period (c. 5300-4300 BCE)
- Located in Iran’s Tehran Plain
  - A part of the larger site Rayy
- Excavated in the 1930s by Erich Schmidt
- Ceramic material is characterized by painted black or brown decoration on red ware of varying shades
  - Painted decoration is usually geometric, stylized, or related to animals or plants
  - Depictions of “floral scrolls” and ibexes are frequent among the material
- Cheshmeh Ali-style ware
  - Found at sites across the Tehran Plain and beyond
- Scholarship on Cheshmeh Ali is limited

Responsibilities in the Near East Collections
- Inventory
  - Cross-checked object IDs and field numbers
  - Identified sherd types
  - Wrote descriptions of sherds
- Photography
  - Photographed over 300 vessels and sherds, all of which were previously not photographed or digitized
  - Shot on photography
    - Well-suited for complete vessels and large sherds, especially those with raised elements and curves
  - Shot down photography
    - Well-suited for sherds
- Overarching intention: ensure the Cheshmeh Ali material is accurately recorded, represented, and digitally accessible to researchers and visitors of the Penn Museum’s digital collections

Research Focus
- My research centers on three questions:
  - What are the interactions between vessel/sherd motifs and forms?
  - Is there a shared vocabulary of motifs and forms across sites from the Transitional Chalcolithic?
  - And, considering these, what can be deduced about social complexity?
- I am also thinking about:
  - Scholarship and interpretations of the material
  - Comparative sites and the reach of Cheshmeh Ali ware

From the Archives
- Photographs of Cheshmeh Ali artifacts on display in Iran at the house where Erich Schmidt and his colleagues gathered (as seen above)
- Photographs of individual artifacts taken in Iran, many of which are in the Penn Museum today
- Field log, financial documents, applications, maps, and telegrams

Culminating Project
- Creating a Scalar “book,” in which I will organize and present my research and analysis
- This format encourages me to play with ways of communicating academic content to different audiences

Peruse Cheshmeh Ali material in the online collections here!
